

As a radio technician for eleven years and having to deal with RFI and as an engineer working to contain RFI both from getting out and getting into equipment, I can see where this proposal will cause untold grief for all users of the radio spectrums. Having used frequencies as low as 2MHZ, I can see where this proposal will be totally uncontrollable in it's propagation patterns and it's coverage of the planet and space. THIS WE DO NOT NEED! Do not let this abomination loose on the public. Also consider the fact that the power companies are in trouble managing what they have and are doing so penny wise and pound foolish. Do not let them expand into a field that they are not needed in and have no experience dealing with. If they were as good as they claim, the recent blackouts that we have had would not have occurred. Excessive executive salaries in all of the US industries have drained the growth money from these companies and thus we are in the position that we are now. Just a few millions invested in the power grids would have removed the cause of the blackouts and brownouts we now see. Do NOT bow to external pressures and let this be approved as it WILL, I SAY WILL, cause untold problems and the limiting of the transmitted power will NOT cause it to be contained. As you go up in speed of transmitted intelligence so does your emission of unwanted splatter or frequencies, and these can not be contained. It is much easier to say no than it is to clean up a mess, let them do their own job and do it well and leave this to those that are capable of doing it in a safe manner(spurious radiation contained).
